Official User Guide

Locations On Demand Video

NOLYM

Real people. Real places. Live by request.

Discover the Waterfall, request a place, fulfill Live View Requests as a Lensman, go live publicly, manage your Wallet, and control your account — all from one connected experience.

CURRENT EXPERIENCE

September 2026 edition

The world, on demand.

NOLYM puts the viewer in control of what becomes live.

What NOLYM is

NOLYM is a live discovery and connection platform built around Locations On Demand Video. Instead of waiting for someone to broadcast from a place you care about, you can create a Live View Request and ask an eligible Lensman to show that place live.

You can also use NOLYM as a creator: discover requests, fulfill eligible paid Live Views, publish to the Waterfall, or start a public live broadcast.

THE CORE IDEA

Choose the place. Request the view. Experience it live.

VIEWER

Request the world

- Search for a place or destination.
- Create a Live View Request and set the details.
- Track the request in My Requests.
- Join the live session and keep an eligible recording.

LENSMAN

Show the world

- Keep your account, location and camera ready.
- Discover eligible requests in Alerts.
- Accept requests you can safely fulfill.
- Complete eligible paid sessions and earn.

Everything you need to use NOLYM.

PROFILE

Manage

04	Account & verification	Secure sign-in, verified email and sessions
05	Waterfall	Discover uploads, creators and public live experiences
06	Create & share	Publish your own content to NOLYM
07	Request & map	Search, zoom, choose a place and request it live
08	Direct Request	Ask a creator you already know
09	My Requests	Track status, join sessions and keep eligible recordings
10	Become a Lensman	Prepare to fulfill requests and earn
11	Alerts	Review eligible requests, active work and history
12	Fulfill a request	Accept, arrive, go live and complete
13	Go Live	Prepare and start a public live broadcast
14	During a public live	Manage the broadcast and end it correctly
15	Profile & favorites	Build identity and reconnect with creators
16	Wallet	Manage credits, earnings and payout readiness
17	Notifications	Separate Live View events from social activity
18	Security & controls	Review sessions, blocks and account controls
19	Safety & location	Use NOLYM responsibly and lawfully
20	Troubleshooting	Fast checks for common issues
21	Glossary	Key NOLYM terms
22	Legal & IP	User notices, trademark and patent status

Verify your identity before NOLYM unlocks the network.

NOLYM protects authenticated features behind verified account access.

Start with a verified account

Create or sign in using the current in-app account flow.

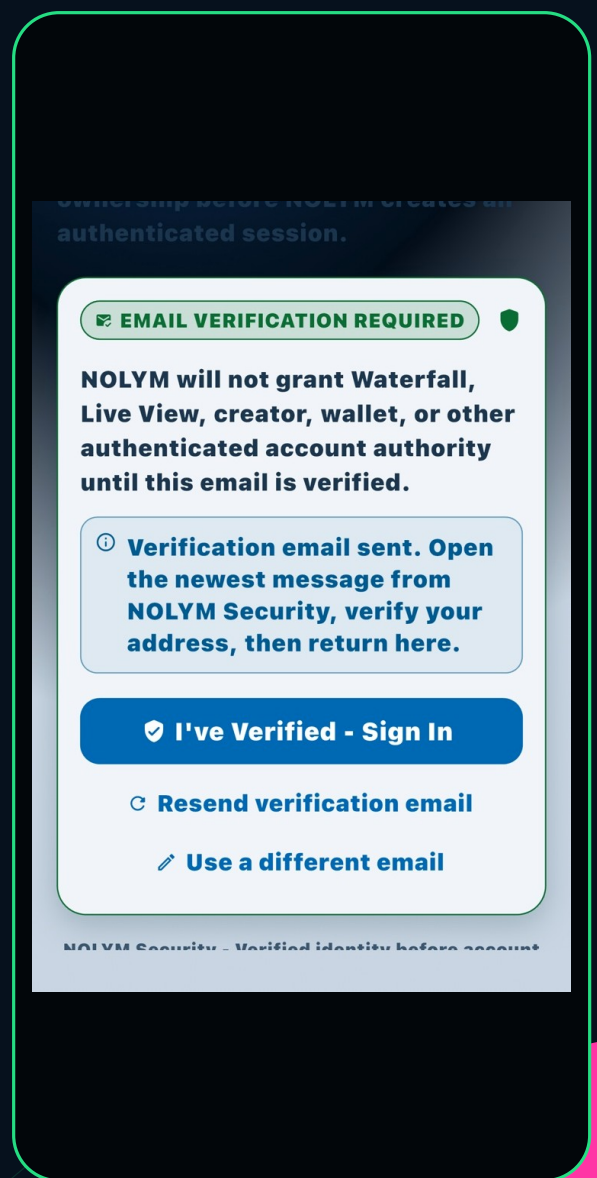

If NOLYM asks you to verify your email, open the newest verification message, complete verification, then return and sign in again.

WHAT TO DO

- Keep access to the email tied to your account.
- Use Resend verification email if the first message does not arrive.
- Review active sessions later in Account Settings.

NOLYM TIP

Changing devices may require a fresh authenticated session.

Current NOLYM interface - example

Discover what is happening beyond where you are.

The Waterfall blends creator uploads, public live experiences and people worth following.

Explore the Waterfall

Use Global to explore broadly and Following to focus on creators you already follow.

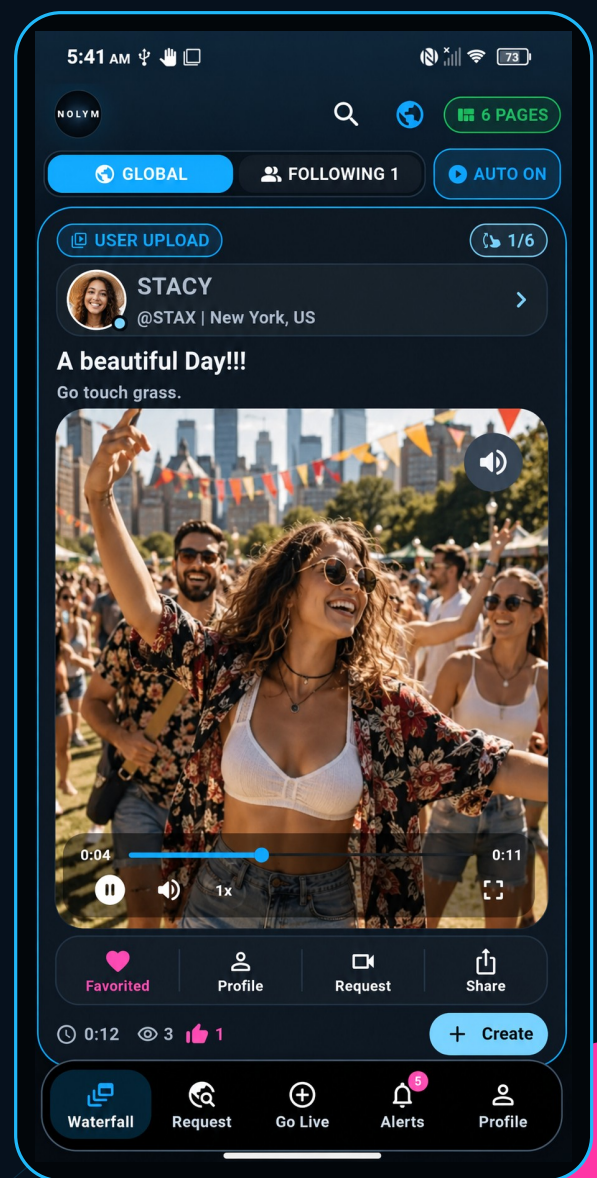

Creator cards can lead to profiles, favorites, sharing and Live View Requests when those actions are available.

WHAT TO DO

- Tap a creator name or profile action to learn more.
- Favorite creators you want to find again.
- Use Request when you want a place or creator to become live for you.

NOLYM TIP

The Waterfall is discovery. A Live View Request is intent. NOLYM connects the two.

Current NOLYM interface - example

The Waterfall is not only for watching.

Publish your own perspective with text, photos or videos, then let people discover it.

Create on NOLYM

Use the Create action from the Waterfall to publish your own content. The current experience supports text, photos and videos from one creation flow.

Keep captions useful and authentic. Your uploads help viewers decide whether to follow, favorite or request you directly.

1 Choose a format

Start with text, a photo or a video.

2 Add context

Use a clear caption and useful location context when appropriate.

3 Review

Confirm the media and description before publishing.

4 Publish

Approved content can become part of creator discovery and the Waterfall.

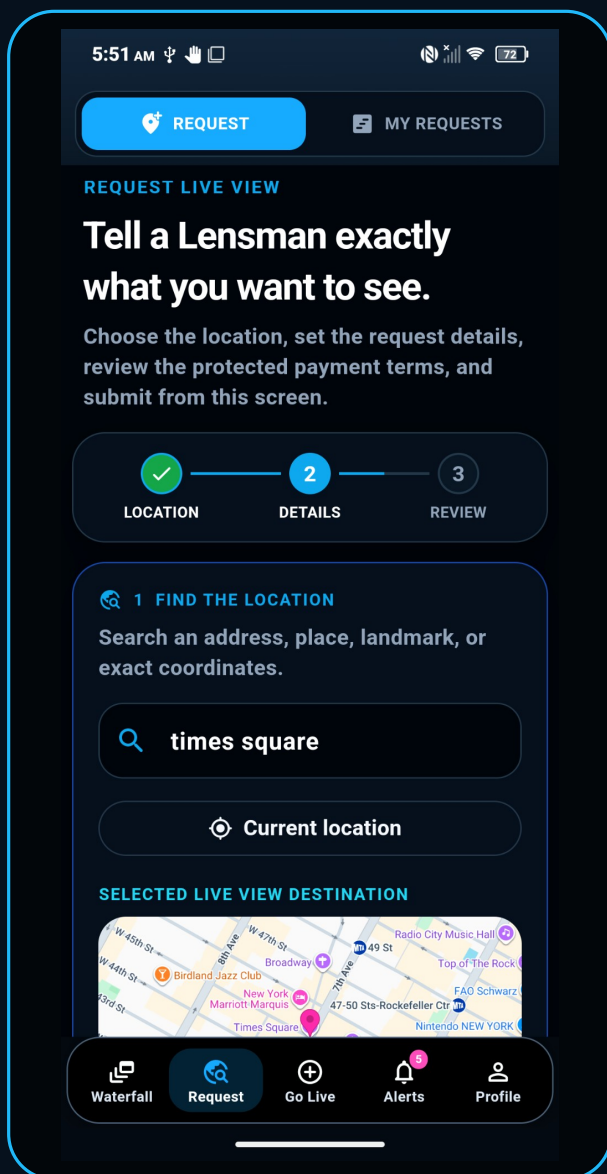

Waterfall creator actions

Think like a viewer

Share the kind of perspective that makes someone want to follow you - or request a Live View from you.

Zoom in, explore the map, and request the live view you want.

Search for a place, inspect the area, then turn that location into a Live View Request.

Current NOLYM request interface - example

Use the map before you request

Search for an address, place, landmark or supported coordinates and confirm the destination shown in the app.

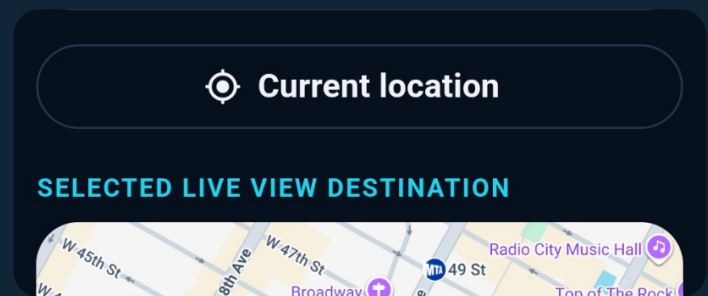

Zoom in and inspect the area closely enough to understand what you are asking a Lensman to show.

Continue to request details, choose the options shown in the app, then review before sending.

WHAT TO DO

- Pinch to zoom in and out, then pan to inspect the exact area.
- Confirm the destination carefully before continuing.

ZOOMED MAP VIEW

Pinch to zoom. Pan to inspect. Confirm the exact location.

Request a creator you already know.

Favorites and creator profiles can turn discovery into a direct Live View connection.

Direct Live View Requests

When a creator supports direct requests, NOLYM can let you request that specific Lensman instead of sending the opportunity to the wider eligible network.

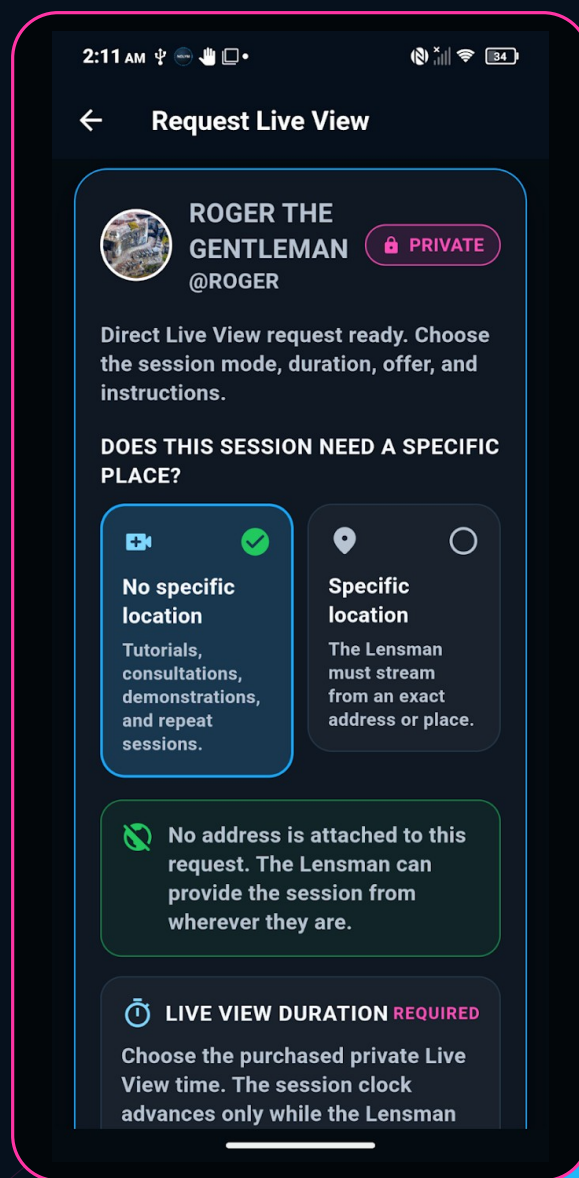

Depending on the session, you may be able to choose a specific location or a remote/no-specific-location mode.

WHAT TO DO

- Choose the duration and offer shown in the app.
- Use a specific location only when physical presence is required.
- Keep instructions clear enough that the creator knows what success looks like.

NOLYM TIP

Direct does not mean automatic. The creator still decides whether to accept the request.

Current NOLYM interface - example

Track the request from sent to completed.

My Requests is the place to check the current state of a Live View.

Current NOLYM interface - example

Follow the lifecycle

NOLYM shows the request moving through the states that apply to that session - from the initial request through acceptance, arrival or readiness, live video and the final outcome.

Use My Requests to re-enter an active session when offered, review timestamps, see completion status and access recording or problem-reporting actions when available.

WHAT TO DO

- Return here if you need to check status.
- Use the current in-app action for cancellation, refund or credit, or problem reporting.
- Download the viewer-owned recording when NOLYM marks it ready.

NOLYM TIP

The state shown in My Requests is authoritative for that request.

Turn where you are into someone else's view.

A Lensman fulfills Live View Requests and can earn from eligible successfully completed paid sessions.

Before you accept a request

- Use a verified NOLYM account and keep the required permissions ready.
- Review the request details, location and compensation shown in the app.
- Accept only requests you can fulfill legally, safely and within the active request state.
- Keep NOLYM available while fulfilling the request so you can follow state changes.

THE LENS MAN FLOW

1 Discover

Eligible requests appear in Alerts.

2 Accept

Choose work you can safely fulfill.

3 Deliver

Follow the active request lifecycle.

4 Complete

Finish through NOLYM and review the outcome.

Earnings are tied to eligible completed paid requests.

The request card and final receipt show the terms that apply to the session. Wallet and payout availability depend on your account state and current payment-provider requirements.

Your Lensman work arrives through Alerts.

Alerts separates Live View opportunities, active work, history, reliability guidance and social activity.

Find and manage request opportunities

The Inbox can surface eligible Live View Requests when they are available to you. If none are active, NOLYM simply shows that no qualifying request is available at that moment.

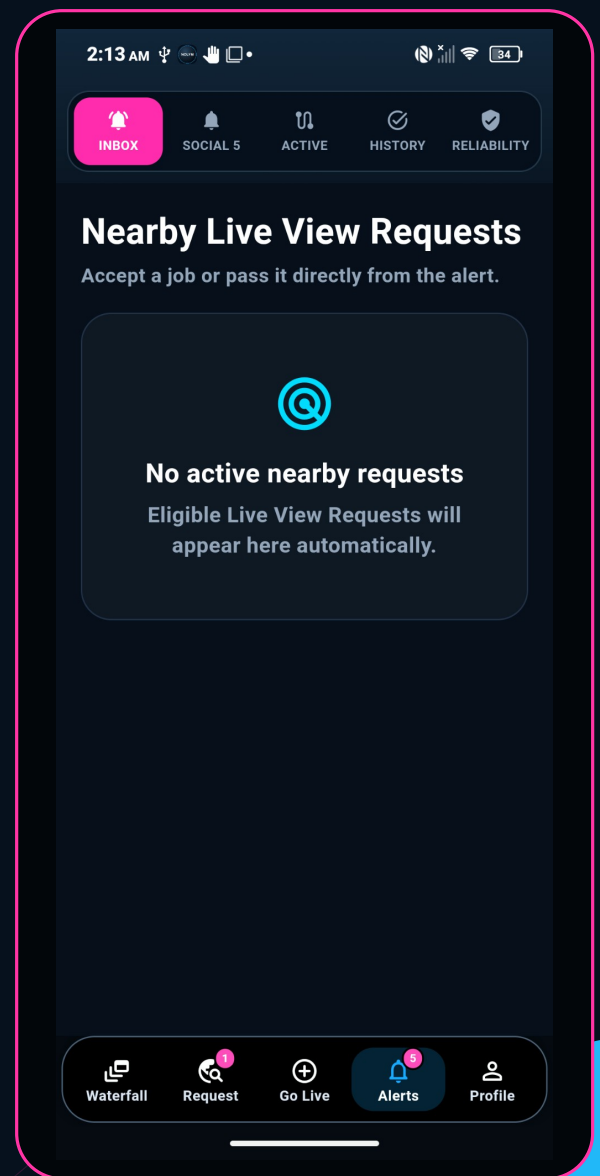

Use Active for accepted work, History for past jobs and Reliability for the account guidance currently presented by NOLYM.

WHAT TO DO

- Read the request before accepting it.
- Confirm that you can safely fulfill it.
- Keep NOLYM available so you can follow state changes.

NOLYM TIP

Availability changes constantly. Seeing no active requests is normal.

Current NOLYM interface - example

Follow the state shown in the app - not memory or guesswork.

NOLYM guides the Viewer and Lensman through the request lifecycle. Exact actions can vary by request type and current state.

1

ACCEPT

Read the request and accept only if you can fulfill it.

2

TRAVEL / PREPARE

For a place-based request, move toward the requested location. Remote sessions may not require travel.

3

ARRIVE / READY

Use the in-app action that confirms you are ready for the Live View.

4

LIVE

Show the requested perspective and follow lawful Viewer instructions.

5

COMPLETE

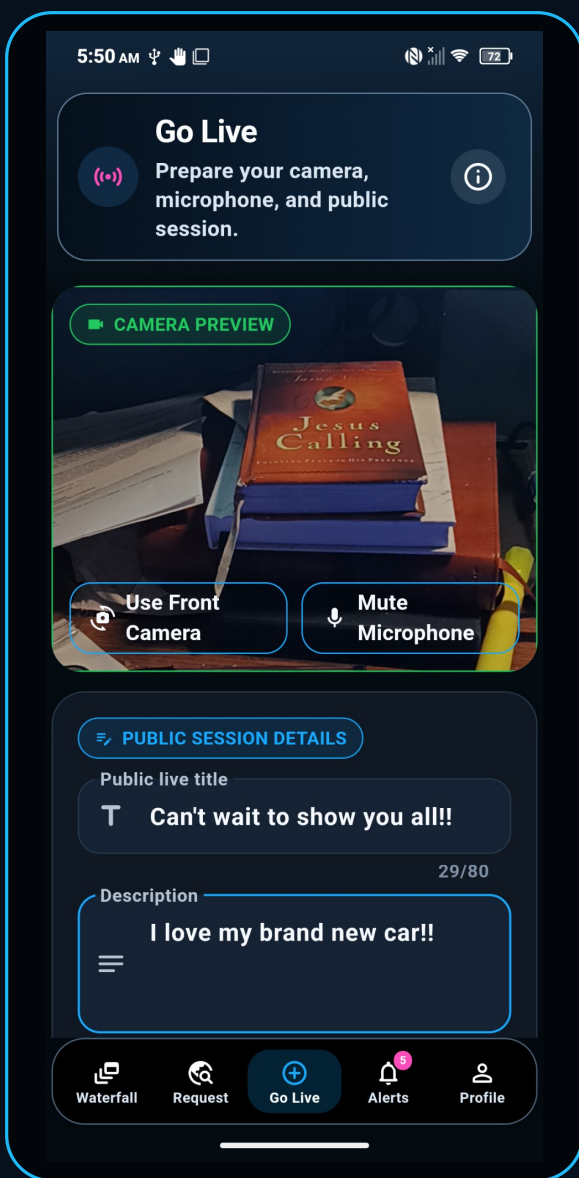

End through NOLYM and review the final status, recording and receipt.

IMPORTANT

Do not improvise around the lifecycle. If NOLYM shows a request as cancelled, expired, completed or otherwise unavailable, do not continue the session outside the authorized NOLYM flow.

Public Live starts with readiness - not a blind broadcast.

Prepare the session before you activate the listing.

Current NOLYM interface - example

Prepare a public broadcast

Open Go Live and complete the readiness items shown in the app. Confirm your signed-in creator identity, verified account state, current location when required, and camera or microphone access.

Preview the camera before activating the public listing. Add the current title and description, then confirm the preview is usable.

WHAT TO DO

- Preview first.
- Check the title and description.
- Confirm camera and microphone permissions.
- Activate only when the source is actually ready.

NOLYM TIP

A public listing should never be activated before the camera source is ready.

Stay in control while you are broadcasting.

The live screen shows source status, audience context and the action to end the broadcast.

During the broadcast

Watch the source-ready and live indicators so you know what the audience can receive. Use the available controls to manage the camera, microphone and audience interaction.

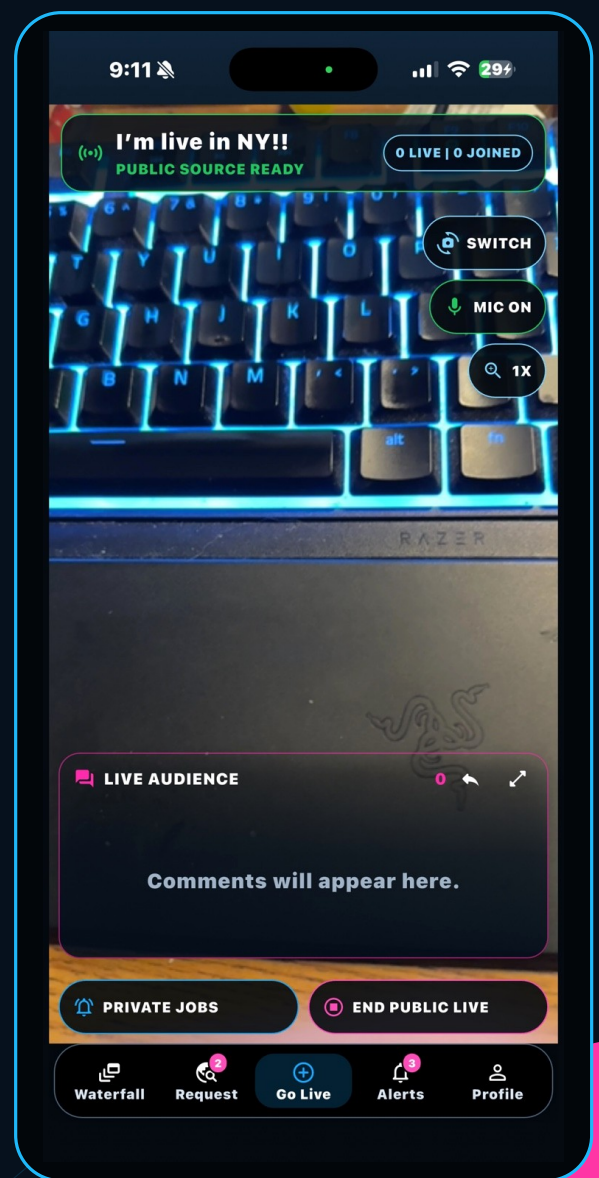

When you are finished, use End Public Live or the current in-app end control. Do not assume that leaving the screen ended the broadcast.

WHAT TO DO

- Keep the device stable and the subject in view.
- Do not expose private information in comments or video.
- End the broadcast using the in-app end control.

NOLYM TIP

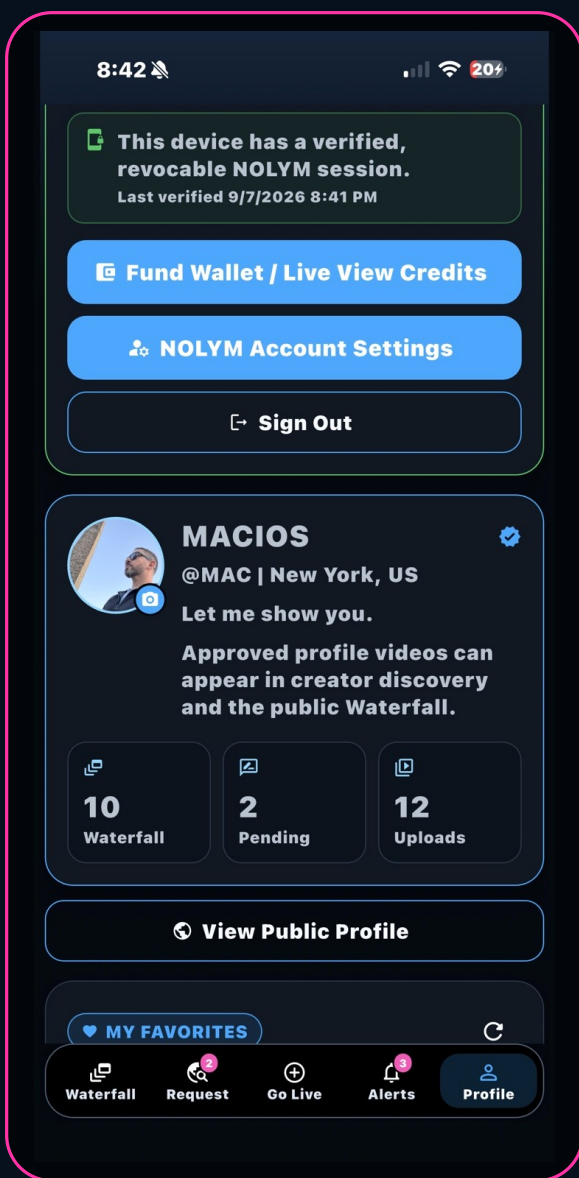

Public Live is creator-initiated. Live View Requests are viewer-initiated. NOLYM supports both.

Current NOLYM interface - example

Your profile is the bridge between discovery and repeat connection.

Profile brings together creator identity, uploads, favorites and account shortcuts.

Current NOLYM interface - example

Build a profile people can trust

Your public profile helps others understand who you are, what you share and whether they want to follow or favorite you.

Favorites make it easier to return to creators you value, and direct-request availability can create a repeat connection between Viewer and Lensman.

WHAT TO DO

- Use a recognizable profile name and image.
- Keep your bio useful and appropriate.
- Use Favorites to build a trusted creator list.

NOLYM TIP

Your public profile is visible content. Account and security controls remain separate.

Credits, earnings and payout readiness live in one place.

The Wallet shows the financial side of NOLYM without requiring you to understand payment infrastructure.

Use the Wallet

The Wallet can show available Live View credits, eligible Lensman earnings, Live View spending and history. Funding and payout options appear according to your account state.

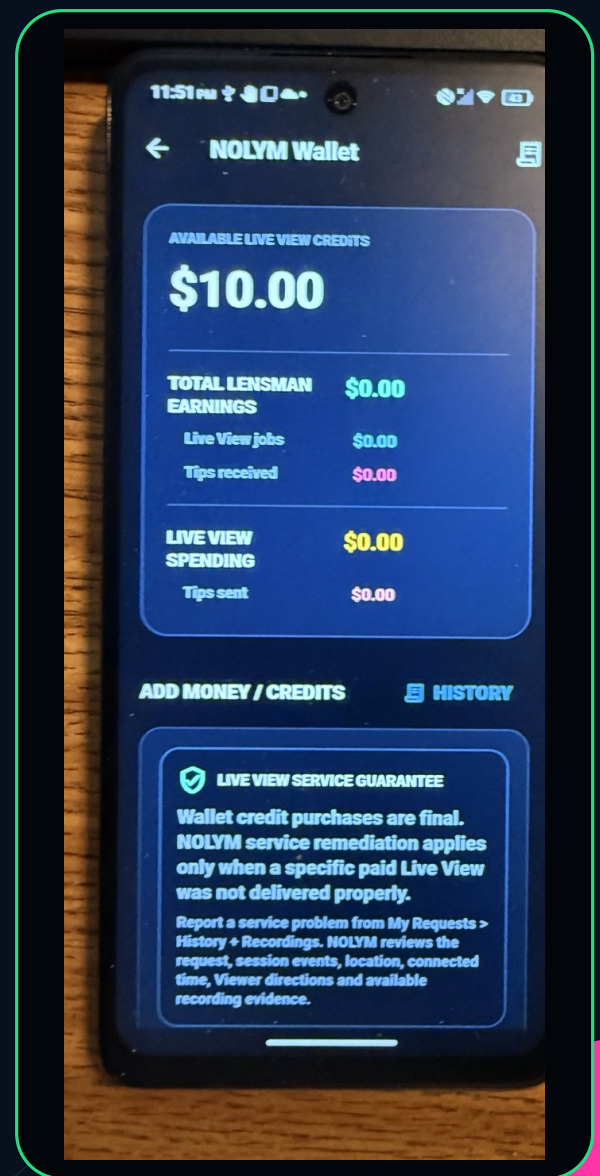

When adding funds or receiving earnings, follow the payment and identity steps shown in NOLYM.

WHAT TO DO

- Review your current balance before creating a paid request.
- Complete payout setup if you plan to earn as a Lensman.
- Use Wallet history and Live View receipts as your record.

NOLYM TIP

Funding, fees, refund or credit eligibility, and payout availability follow current in-app terms.

Current NOLYM interface - example

Live View alerts and social activity stay organized.

NOLYM separates request-critical events from the social activity around your creator presence.

Current NOLYM interface - example

Know what kind of alert you are seeing

Alerts can include separate areas for request Inbox activity, social activity, active requests, history and reliability information.

Social activity can include follows, likes, shares, comments and replies, while Live View and payment events remain distinct.

WHAT TO DO

- Keep Live View alerts enabled if you want to respond quickly.
- Tune non-critical activity through social notification settings.
- Open NOLYM and check Alerts directly if a device notification is delayed.

NOLYM TIP

Social engagement should never distract you from the state of an active paid request.

Know which devices are signed in - and revoke what you do not trust.

Account Settings gives you direct control over sessions, blocks, following, notification preferences and safety reports.

Protect your NOLYM account

Open Account Settings to review active devices and signed-in sessions. If you see a session you do not recognize, use the available revoke control.

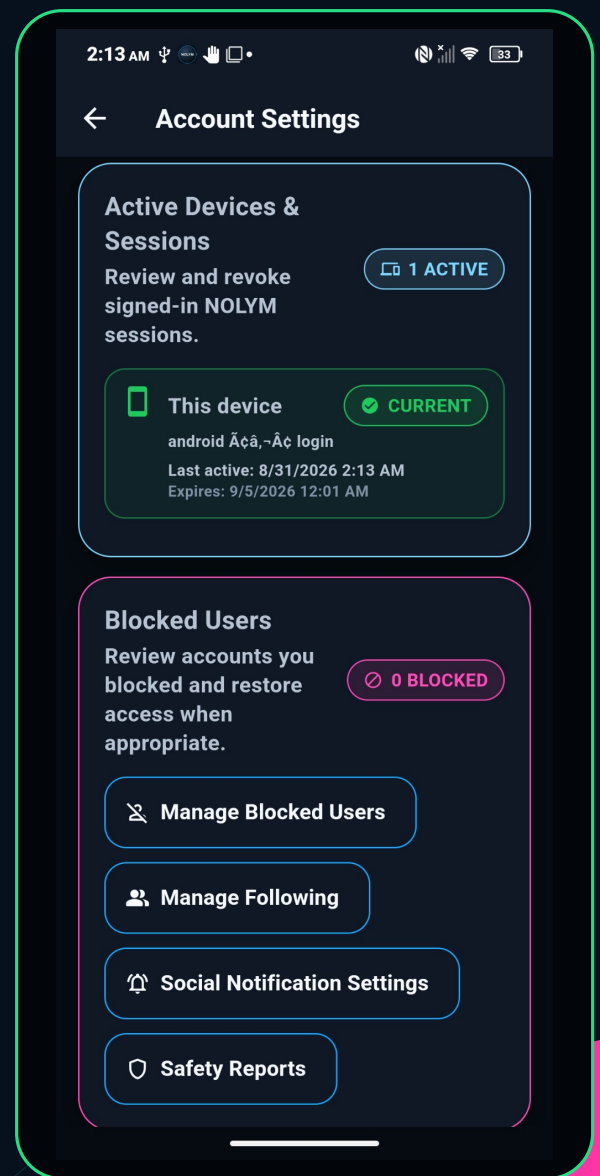

Blocked Users, Following and notification settings help you control the people and activity around your account.

WHAT TO DO

- Use a unique password and keep access to your verified email.
- Review active sessions after changing devices.
- Block or report accounts when appropriate.

NOLYM TIP

A verified session is a security feature, not a reason to ignore device hygiene.

Current NOLYM interface - example

A live request never overrides safety, privacy or the law.

Use NOLYM only where you can lawfully be, lawfully record and safely operate your device.

Use good judgment before you request or stream

- Do not trespass. A request does not grant access to private property or restricted areas.
- Respect privacy. Do not intentionally film private conversations or prohibited subjects.
- Follow local law. Recording, audio and consent rules vary by jurisdiction.
- Do not stream while driving. Operate NOLYM only when it is safe and lawful.
- Decline unsafe requests. A Lensman should pass or decline anything unsafe or unreasonable.
- Report problems. Use available reporting tools when conduct violates platform expectations.

LOCATION ACCESS

NOLYM uses location where needed to help create and fulfill place-based Live View Requests. Keep location permissions appropriate to the feature you are using.

Start with the state NOLYM is showing you.

Most issues can be narrowed down quickly by checking verification, permissions, connectivity and the request state.

I cannot access Waterfall, Live View or Wallet

Confirm your email is verified, then sign in again.

Camera or microphone is not ready

Allow NOLYM camera and microphone access, then preview again.

A place-based request is not working

Confirm location permission and verify the selected place.

I do not see nearby requests

There may be no eligible requests near you at that moment.

My Live View disconnected

Return to the active request and follow the re-entry option NOLYM shows.

My recording is not ready yet

Check My Requests for recording status and use Report a Problem if needed.

Wallet or payout is not ready

Open Wallet and follow the current funding or payout-readiness action.

I think another device is signed in

Review Active Devices & Sessions and revoke anything you do not recognize.

Still stuck?

Use the in-app Report a Problem flow where available and visit nolym.app for current support information.

Speak NOLYM.

The core terms used throughout the app and this guide.

Waterfall

NOLYM discovery for creator uploads, public live content and perspectives across the network.

Viewer

The person requesting or watching a Live View.

Lensman

A NOLYM user who can accept and fulfill eligible Live View Requests.

Live View Request

A viewer-created request for a live perspective, often tied to a place and instructions.

Direct Live View Request

A request sent to a specific creator, with a specific location or remote mode when available.

Public Live

A creator-initiated broadcast discoverable by the NOLYM community.

My Requests

Viewer area for tracking status, recordings, receipts and problem reporting.

Alerts

Center for eligible requests, active work, history, reliability and social activity.

Wallet

Area for Live View credits, eligible earnings, spending history and payout readiness.

Favorite

A saved creator/Lensman you want to find again quickly.

The world, on demand.

Real people. Real places. Live by request.

Important notices

Live View Request fulfillment depends on Lensman availability, acceptance, location access, applicable laws, and platform requirements. Earnings apply to eligible successfully completed paid requests.

NOLYM Locations On Demand Video technology was born in 2022 and released worldwide through NOLYM 1.0 in 2024.
